Sonova UC Keyboard Layout: Layers

The image displays the 'Sonova UC Keyboard Layout: Layers' configuration window, which allows users to define and switch between different keyboard layouts. The window is divided into four sections, each representing a different layer. Each section includes a visual representation of the keyboard layout, a set of configuration options, and a legend.

Layer 1 (Top): Shows a standard QWERTY layout. The 'Show the Caps Lock' checkbox is unchecked. The 'Shift states' section has 'Shift', 'Alt+Ctrl (AltGr)', and 'Ctrl' all unchecked. The legend includes 'Assignable', 'Dead key', 'Clipped Text', and 'Unassignable' options. The 'Current working directory' is set to 'C:\Documents and Settings\Hedman\Desktop\KeyLayouts for PC'. The 'Built keyboard layout location' is empty.

Layer 2: Shows a layout with various navigation and editing keys. The 'Show the Caps Lock' checkbox is unchecked. The 'Shift' checkbox is checked. The legend and directory settings are the same as in Layer 1.

Layer 3: Shows a layout with letters and symbols. The 'Show the Caps Lock' checkbox is unchecked. The 'Alt+Ctrl (AltGr)' checkbox is checked. The legend and directory settings are the same as in Layer 1.

Layer 4 (Bottom): Shows a layout with mathematical and scientific symbols. The 'Show the Caps Lock' checkbox is unchecked. Both the 'Shift' and 'Alt+Ctrl (AltGr)' checkboxes are checked. The legend and directory settings are the same as in Layer 1.

Each layer's visual representation includes a keyboard grid with keys labeled with their respective symbols or characters. The 'Legend' section for each layer provides a key to identify the status of each key: Assignable (light gray), Dead key (dark gray), Clipped Text (white), and Unassignable (black). The 'Current working directory' and 'Built keyboard layout location' fields are consistent across all layers.
